

Vertical Cable Protectors

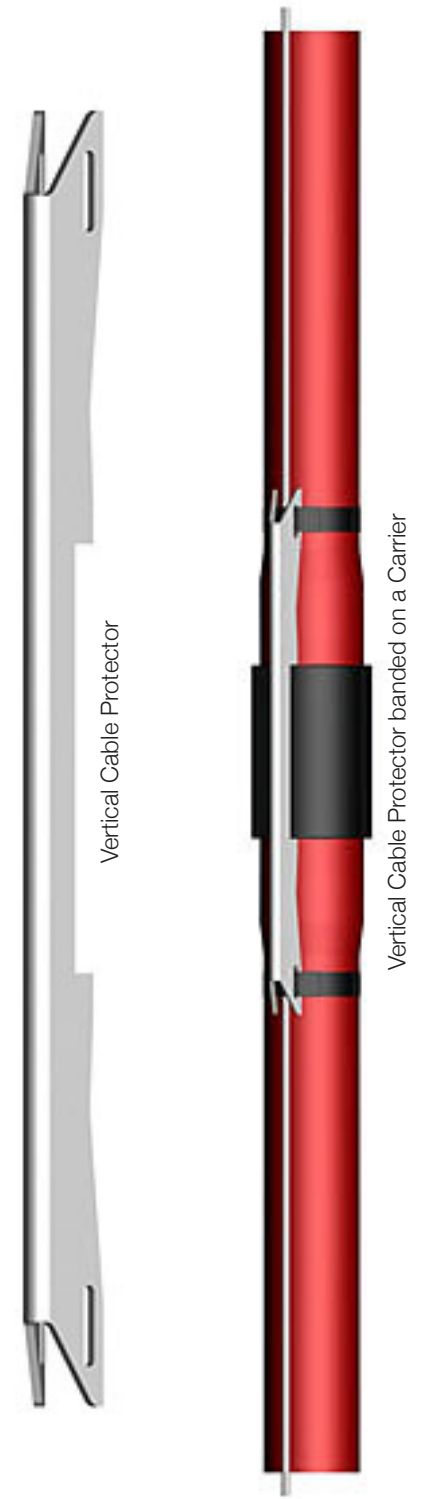

The Cable Protector shields and supports the cable on the tubing or casing as well as helps to prevent the crushing of the cable over the tubing joint.

Durable materials resistant to corrosion are used for the cable protectors. Different dimensions for a variety of tubing, casing and cable sizes are available for the cable protectors. A banding machine is used to fit the cable protector tightly to the collar joint.

The cable protector is an economical and simple to use protector option in well-bore deviations from vertical to 30 degrees.

FEATURES
Simple to use
Economical
Vertical (to 30 Degrees) Applications
Supports and protects cable
